

Remove apartment handsets. Reduce on-floor intercom scope.

JAXIAN routes visitor video calls to residents through WhatsApp - without a dedicated resident app or an intercom monitor in every apartment.

THE COMMERCIAL CASE

A lighter intercom architecture for apartment projects.

Reduce apartment-level hardware and simplify fit-out, while giving residents a familiar entry experience from day one.

01 LESS HARDWARE

No in-apartment monitors to procure, install, commission or replace.

02 LESS APARTMENT SCOPE

No dedicated intercom cabling termination at every residence.

03 FASTER RESIDENT ADOPTION

Residents answer in WhatsApp without downloading a proprietary resident app.

TECHNICAL ALIGNMENT

Designed around the building, not the apartment wall.

ENTRY iPad directory or professionally installed QR entrance

ACCESS Inner Range Inception integration for doors, lifts, credentials and history

OPERATIONS Manager dashboard, resident self-service and parcel workflows

OPTIONAL SCOPE Integrated JAXIAN timber parcel lockers

PREFER AN IN-APARTMENT SCREEN? Choose a desk-mounted wireless tablet with standard intercom controls and the complete resident interface - without apartment intercom wiring.

SPECIFY JAXIAN EARLY

Make intercom a value-engineering conversation.

Invite JAXIAN to review apartment count, entry points, lift strategy, access-control architecture and delivery requirements. Project-specific design and commercial modelling available.
